181 FREMONT

FRONT DESK · RESIDENT EVENTS ADMIN

Resident events, from the desk

181residents.com/admin · sign in as concierge@181sf.com · keep beside the desk phone

1 · Signing in

- Go to **181residents.com/admin**. The quiet **Staff** link at the foot of any page of the site lands in the same place.
- Enter **concierge@181sf.com** and ask for the emailed code. It arrives in the desk mailbox; type it in and you are through.
- The first code often comes back "already been used." That is the mail scanner opening the link before you can, not a mistake of yours. **Request a new code**; the second one works.
- **Stay signed in** on the desk computer; there is no need to sign out between shifts, and each fresh sign-in costs another emailed code.

2 · The lost code, any hour

- **Residents**, then **Roster**. Type a name or unit in the **find box**; the household card opens with the person in it.
- **Email code** first: a written draft opens in Outlook on the web or the desktop app (the machine remembers which), addressed to the email on file, ready to send.
- In person? **Print** on the row makes one fresh code card at the lobby printer. A lost card that could be found: **Rotate** first, which stops the old code everywhere, then email or print the new one.
- One code per person; couples each have their own. Never share a code between people.

3 · Temporary stays

- A renter or a visiting family member gets their own row: unit, name, email, and an **Access ends** date. The code simply stops working after it.
- End dates, emails, and **Disable** live behind **Edit** on the row. Disable keeps a mover-out's history; leave **Delete** alone, it is for typos.

4 · RSVPs by phone, or in passing

- **Dashboard**, RSVPs section, **Add an RSVP for someone**: person, event, party size, then **Save RSVP**. Saving over an existing RSVP updates theirs.
- Full event, or others waiting? The RSVP joins the waitlist, the same queue as the site. Say so kindly; nobody skips the line at the desk.
- On the site residents book **up to 3**; a bigger party is told to contact us. That is you: the desk seats **up to 6**.

5 · Changes and cancellations

- **Edit** on any RSVP row opens the full card: party size, names, or a **move to another event**. **Cancel** asks first, then asks whether a note should go.
- **Confirm seats** appears on a waitlist row once seats free up. Freed seats are never handed out on their own; pressing it gives them to that party.
- After any change, a note to the resident is offered: it opens written and addressed from your own mailbox, web or desktop Outlook. No email on file? A call closes the loop.
- On event day it is the door list: **Check in** seats a whole party in one tap, takes a number when fewer came, and holds a short door note on the row.

6 · Private-party nights

- Guests arrive announcing the **event name**. The list: **181 Spaces**, its **Guests** panel, or the printed sheet.
- Press **Arrived** beside each name; plus-ones have their own lines. A name not listed: check with the host, then **Add**. **Email** and **Edit** sit on every line.

7 · What the desk view leaves alone

- Events, publishing, and Assets belong to Resident Experiences. Message text is private to Leo; you see who wrote and when, never the words.
- A neighbor note that must come down at 2 AM can: **Remove** in Messages, named under **Past notes**; **Restore** puts it back.
- The grey bar at the top stays quiet when all is well. If something looks wrong: reload; still wrong, call Leo and read him what the bar says.
