Running the calendar

181residents.com/admin · sign in with your own email · the full guides live under Settings

1 · Signing in

- **181residents.com/admin**, your own email, then the emailed code. The first code may say "already been used": the mail scanner opened it first. Request another; the second works.
- **Sign out**, top right, on any shared machine.

2 · Events and the editor

- **Events** tab: **+ New Event**, or **Edit** on a row. A multi-day event takes start and end dates, one entry per day. **Delete draft** on a row removes what was never published. **Publish calendar** rebuilds the resident site.
- **Publish** puts an event out and reads **Unpublish** once it is (RSVPs held). **Save draft** never changes where an event stands. **Archive** is for what is over, kept for reporting.
- On a **Live** event, Save draft keeps your edits as a **working copy** residents never see; **Publish changes** sends them out, **Discard draft** lets them go.
- Every save lands in the **change history** at the editor's foot: who, when, what. **Load this version** brings any earlier version back for review.

3 · How far ahead residents see

- Two dials atop Events: full pages with RSVP so many **weeks** out, then quiet "Details to come" dates so many **months** out, then nothing. The windows slide forward on their own.
- **Coming soon** on one event publishes a teaser: date and title showing, RSVP and calendar buttons waiting.
- **Announce ahead of the window**, in the editor, steps one event out on purpose: full page and RSVP now, while everything else keeps to the dials.

4 · Series

- One row per date, so a single week can be moved or skipped without touching the rest. **Edit on a series row edits the whole series**; the same dropdown picks one date to touch alone.
- Move a date and its sign-ups follow; nothing is orphaned.

5 · Capacity, closing, the waitlist

- RSVPs close three ways: **capacity fills** (waitlist begins), the **RSVP closes** date passes, or the **Close RSVPs now** switch. Held parties always keep their seats.
- Freed seats are never given out on their own. **Confirm seats**, on the Dashboard, hands them to the next waiting party, and a note opens ready to send.
- Residents book up to the party size each event sets (out of the box 3, up to 5); **Please contact me** always shows, and staff seat up to 6 from the Dashboard.

6 · Telling residents

- Change a Live event's date, time, or place while people are signed up, and one BCC email opens to all of them, old and new spelled out, web or desktop Outlook. Read it, send it.
- **Cancel this date** pulls the event, holds the RSVPs, then asks whether the note opens; nothing sends itself.
- **Link** copies a date's page; **Short link** copies the standing **/e/** address that always lands on the next date, made for QR and print.
- Calendar subscribers update on their own; anyone holding a one-time copy adds it again after a change. The drafts say so.

7 · RSVPs from the Dashboard

- **Edit** on a row changes the party or **moves the RSVP to another event**, under the new event's own rules. **Cancel** asks first, then asks whether a note goes.
- On the day, **Check in** works the door: a whole party in one tap, a number when fewer came, a note on the row. RSVPed and came stay two numbers in the CSV.
- **Past events**, at the foot of the RSVP list, keep who came with the arrival tally and emails in view; **Email guests** opens one BCC draft for the thank-you or the survey.

8 · Private events

- A **Spaces** reservation can carry a private event: guests register on one page, the host sends the link, the desk runs the printed list; it rides the Dashboard RSVP list marked **Resident hosted**. Walkthrough under Settings.

9 · Asset kits

- One **master kit** per event or series, under **Assets**; every date inherits it. **Override this date** in the editor gives one date its own file; **Back to series kit** hands it back.

10 · The Archive

- Nothing is filed by hand: a passed or cancelled event drifts in on its own, kit and all. Reach it from **Archive · N** atop Events or Assets; restore by setting the status back to **Live**.

11 · Dashboard, residents, messages

- 7, 30, or 90 days; **Download CSV** opens in Excel. Counts stand beside percentages; read swings as noise until three months agree. Events hosted by others are listed, not counted.
- Residents fold into unit cards with a find box; **Edit** on a row holds emails, end dates, tenant standing, and Disable.
- The inbox shows who wrote, when, and whether it has been answered. The words themselves are for Leo; residents write to a person, not a department.
- The notes board keeps its own account: any tier may take one down, named under **Past notes**; **Restore** honors the original fade date.
